## Wireless data collector hand held for SURF\_GAUGE

Every oil company knows how important is to monitor well head pressure right there in gas wells, gushers and also water injection wells.

A Professional and cost effective way to get this data is with a SURF\_Gauge-PT combined with this hand held that reduce operation costs and increases oilfield understanding.

This hand held allows to retrieve recorded temperature and pressure data from one or several wireless surface gauges.

Data is retrieved while gauges are still connected to the well head and also allows to get on-line readings.

It is well suited to monitor well production decay or perform production and injectivity tests.

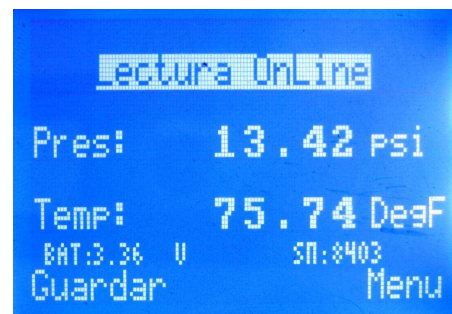

Well head pressure curves provides useful information when it comes to decide optimal production regimes and chokes. Once downloaded to a PC all this information can be presented as graphs tables or curves with the provided MemLog software.

Easy to use dedicated menus.

Compatible SD card.

Only six large keys keyboard allows its use even for operators while wearing gloves.

Real time readings

### Characteristics and benefits:

**Wireless recovery of surface data.**

**No special permit needed to open well cellar.**

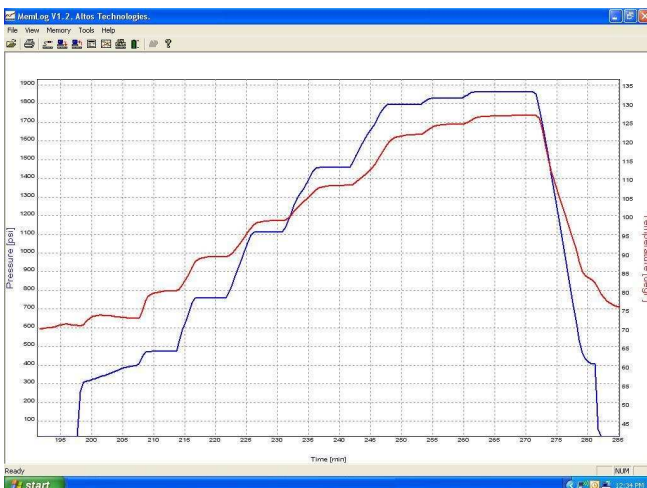

**On line temperature and pressure reading.**

**Backlight allows simple operation, day or night time**

**Fast and easy PC data transfer via SD Card.**

**LI-Ion built in Battery and 12v charger.**

**Fast recording up to 1 sample per second.**

Provided MemLog software plots and export retrieved data.
